**Configuresoft Founder/CTO to Serve as Panelist for CERIAS
Information Security Symposium**

*Noted Cloud Computing Expert Dr. Dennis Moreau to Address Security, Compliance
and Trust in the Cloud*

Colorado Springs, CO — Mar 23, 2009 — Configuresoft, Inc., a leading provider of enterprise server configuration management solutions for physical and [virtual environments](#), announced today that renowned cloud computing security expert and Configuresoft founder and CTO Dr. Dennis Moreau will serve as a panelist for a discussion on security in the cloud at 1:45 p.m. ET on Tuesday, March 24 at the 10th Annual [CERIAS Information Security Symposium](#) on the campus of Purdue University in West Lafayette, IN.

“Cloud computing delivers major agility, hosting and implementation advantages, as well as cost savings, for an innovative class of applications and services by allowing enterprises to leverage IT infrastructure, assets and resources in the most efficient manner,” Moreau said. “But it also introduces some unique security challenges, particularly with regard to achieving visibility across complex layers, intimate resource sharing and increased demands on policy implementation and management. Our aim is to analyze these issues, discuss some solutions and come away with a better understanding of how to achieve improved infrastructure health, security posture and compliance visibility across the IT landscape.”

With more than 25 years of experience in evaluating, designing and managing complex software systems, Moreau specializes in the application of leading-edge technologies at Configuresoft to solve complex configuration, security and compliance problems in the IT management domain. Moreau’s research has been aimed at understanding and addressing the impact of utility computing on systems management, especially the complexity, dynamics, and coupling demonstrated by deeply virtualized, utility computing infrastructure.

Moreau works actively with the National Institute of Standards and Technology (NIST) and Mitre to develop security configuration policy compliance standards. Before coming to Configuresoft, he served as the Associate Vice President and Chief Technology Officer for Baylor College of Medicine. Moreau holds a doctorate in computer science and speaks regularly at IT management and security conferences, including recent engagements at the Office of Naval Research, the Computer Security Institute CSI 2008: Virtualization Security, Cyber Information Security Conference – CISCON 2008, and VMworld 2008.
